

Retail Commerce

Retail Transaction Dashboard

Presented by:
ALDI VIBRIANI

Company Background

Retail Commerce is a leading e-commerce company that specializes in providing a wide range of products to customers across the country. Founded in 2015, the company has grown rapidly and has become one of the most popular online shopping destinations in the region.

Goals

Retail Commerce has accumulated a vast dataset of transactions spanning from 2021 to 2022. The company is seeking the expertise of a Data Analyst to design and develop a comprehensive transaction dashboard. This dashboard will serve as a critical tool for stakeholders, providing them with actionable insights and enabling informed decision-making.

Requirements for the Transaction Dashboard

Overall Transaction Performance

Display key metrics that summarize the company's transaction performance.

Sales Trend Analysis

Visualize the sales trend over time using a line chart to show:

Sales/revenue vs. time

Payment Method Performance

Analyze the performance of each payment method

Best-Selling Products

Identify the top-selling products category

Requirements for the Transaction Dashboard

Discount Spending

Analyze the discount spending for each product/category

Transaction Summary

Provide a summary of transactions for each product and customer

Tools Used

Excel

draw.io

Transaction Dataset

The dataset provided in Image 1.1 serves as the foundation for the transaction dashboard, which will be created by the Data Analyst. To develop a comprehensive and informative dashboard, the Data Analyst will follow a series of structured work steps. These steps will be outlined in the subsequent slide, detailing the process of transforming the raw data into a powerful visualization tool that provides actionable insights into the company's transaction performance.

image 1.1
Dataset transaction 2021 - 2022

Transaction Dataset Attributes

id	A primary key that contain order value
customer_id	The identifier of the customer who made the purchase
order_date	the date of the customer who made the purchase
sku_id	A unique identifier for a specific product variant or stock-keeping unit
price	The original list price of a product, excluding any discounts, promotions, or taxes

Transaction Dataset Attributes

qty_ordered	The number of units of a product purchased by a customer in a single transaction
before_discount	The total price of a product before any discounts are applied
discount_amount	The amount of discount applied to a product
after_discount	The total price of a product after discounts are applied
is_gross	A flag indicating whether the price includes taxes or not

Transaction Dataset Attributes

is_valid	A boolean value indicating whether the transaction or order has been successfully processed and is considered valid
is_net	A flag indicating whether the price is net (exclusive of taxes) or not
payment_id	A unique identifier for the payment transaction
payment_method	The method used to make the payment
sku_name	The unique identifier or name of the product or stock-keeping unit

Transaction Dataset Attributes

base_price	The original or list price of a product before any discounts or promotions
cogs	The cost of goods sold, representing the direct cost of producing or acquiring a product
category	The product category or classification that a product belongs to
registered_date	The date when a customer or user registered or created an account

Dashboard preparation

Prior to creating the transaction dashboard, we begin by designing a mockup. This involves outlining the dashboard's requirements, including the specific graphics to be used and their placement. I use draw.io to create a visual representation of the dashboard, carefully planning the layout and design elements to ensure an effective and intuitive user experience

Insight

☐ Revenue & profit

The total revenue is \$8.66 billion, with a profit of \$2.03 billion. This indicates a profit margin of around 23.4%.

☐ Transaction Volume

There were 5,764 transactions, which is a relatively low volume considering the revenue. This might indicate that the average transaction value is high.

☐ Discounts

The total discount amount is \$33.83 million, which is approximately 0.39% of the total revenue. This suggests that discounts are not a significant contributor to revenue.

☐ Payment Methods

The top payment methods are COD, Payaxis, and Easypay, which account for the majority of transactions.

☐ Product Categories

Mobiles & Tablets, Entertainment, and Computing are the top product categories by revenue.

Feedback and Strategy

Focus on High-Value Customers

The dashboard suggests that a small number of customers account for a significant portion of revenue. This insight can be used to develop a customer segmentation strategy, where high-value customers are identified and targeted with personalized marketing campaigns, loyalty programs, and premium customer service to retain and grow their business.

Optimize Payment Methods

The payment method usage chart shows that certain payment methods, such as COD, payaxis, jazzvoucher, and Easypay, generate significantly more revenue than others. This insight can be used to optimize the payment process, by promoting the most popular payment methods, streamlining the checkout process, and potentially offering incentives for customers to use preferred payment methods.

Category Management

The revenue by category chart shows that certain categories, such as Mobiles & Tablets, generate significantly more revenue than others. This insight can be used to optimize category management, by allocating more resources to high-performing categories, negotiating better deals with suppliers, and developing targeted marketing campaigns to drive sales in these categories.

Feedback and Strategy

Optimize Discount Strategy

The low discount amount as a percentage of revenue suggests that discounts might not be an effective strategy. Consider revising the discount strategy or exploring alternative promotions.

Conclusion

Conclusion

Based on the provided Retail Commerce Transaction dashboard, it can be concluded that:

1. Certain product categories generate significant revenue, allowing the company to maximize its profits by optimizing category strategies.
2. Specific payment methods used by customers generate higher revenue, enabling the company to maximize revenue by optimizing the payment process and promoting the most popular payment methods.
3. A small number of customers generate significant revenue, allowing the company to maximize its profits by developing better customer strategies, such as loyalty programs and premium customer service.
4. Discounts offered on certain product categories are higher, enabling the company to maximize its profits by optimizing discount and pricing strategies.
5. This dashboard can be used as a tool to make better decisions in managing inventory, logistics, pricing, and marketing strategies.

By implementing the right strategies, the company can leverage the data available in this dashboard to maximize profits, reduce costs, and optimize operations.
